### DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance.

Koo(6,987,505) teaches a scrolling wheel having arm(67) for preventing from rotating except when the rotation is desired.

Wang(7,012,594) teaches an input device for providing a ratchet tactile feedback to a user.

Wang et al(6,563,490) teach a scrolling wheel comprising a roller stage having a positioning pole formed thereon for engaging the positioning holes, the positioning pole engaging one of the positioning holes to prevent random rotation of the roller when the roller is rest.

Lin(6,570,108) teaches a mouse with scrolling wheel(54).

None of the cited references teach a scroll wheel having a unidirectional scroll wheel locking element movable to a first position and a second direction which is opposite to the first direction for allowing the scroll wheel only rotating in the first or second direction, with all other limitations cited in claims 1, 10 and 14.

None of cited references teach a scroll wheel rotatable in opposing first and second directions and a scroll wheel locking lever positionable in first, second and third distinct positions; wherein the scroll wheel locking lever moves along a path between the first, second and third positions, with all other limitation cited in claim 18.

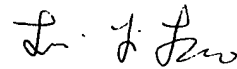

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
